

Albertina - Bonus marking templates

Do your best to mark the tools correctly. If your Corner Beam blocks don't line up perfectly with the markings, don't worry. This pattern is very forgiving, and the chances are your quilt will still look amazing! However, the sub-cutting of the F1 - F7 into center and side triangles needs to be done accurately to ensure the units are big enough after piecing them together.

You can use this paper template to mark the lines needed on your Tucker Trimmer I tool for this technique. The positioning lines are the ones that you need to mark. The other lines are there just for you to be able to line up your tool better.

For personal use only - any kind of sharing with others strictly prohibited.
